

**WILDERNESS INVENTORY MAINTENANCE
IN BLM OREGON/WASHINGTON**
(Source: Oregon State Office Internal Guidance as of July 2007)

Year: 2009 Inventory Unit Number/Name: 2-20, Drinkwater

**FORM 1: DOCUMENTATION OF BLM WILDERNESS INVENTORY
FINDINGS ON RECORD:**

1. Is there existing BLM wilderness inventory information on all or part of this area?

No _____ Yes X (if more than one unit is within the area, list the names/numbers of those units.):

a) Inventory Source: Wilderness Review-Initial Inventory, Oregon and Washington, August, 1979

b) Inventory Unit Name(s)/Number(s): Drinkwater, 2-20

c) Map Name(s)/Number(s): Final Decision-Initial Inventory, August, 1979

d) BLM District(s)/Field Office(s): Burns District – Three Rivers Resource Area

2. BLM Inventory Findings on Record:

Inventory Source: Wilderness Review-Initial Inventory, August, 1979, Pages 26-27

Unit#/Name	Size (historic acres)	Natural Condition? Y/N	Outstanding Solitude? Y/N	Outstanding Primitive & Unconfined Recreation? Y/N	Supplemental Values? Y/N
2-20, Drinkwater	6,510	Y	N	N	NA

**FORM 2 - DOCUMENTATION OF CURRENT WILDERNESS
INVENTORY CONDITIONS**

Unit Number/Name: 2-20, Drinkwater

(1) Is the unit of sufficient size?

Current Unit Acres: 6,044 Yes X No _____

Citizen Information Received: No citizen information for this unit was received.

ID-team Meetings: An ID-team consisting of BLM staff from the Burns District met on January 29, 2009, to evaluate this unit. The ID-team was provided with BLM's current and past maps and past photographs and other inventory descriptions. The ID-team consisted of wilderness, range and planning staff. Wildlife, archaeology, geology and forestry staff were also consulted. Additionally, with the southeast corner of the unit being within Vale BLM District, inter-district coordination was conducted as needed.

BLM's Boundary Road Determination Process: BLM completed a route analysis for the boundary roads identified for the unit. Prior to, and during the ID-team meeting, District staff were contacted and provided information about current uses of routes by BLM personnel, grazing permittees, and other publics.

Boundary changes since 1979: Two boundary changes have been made since the original inventory. A small acreage was added on the southwest corner of the unit and a block of land has been deleted on the northeast corner when the Juntura Cut-off Road was realigned, paved and improved to allow truck-hauling of diatomaceous earth from Eagle-Picher Mine to Vale, Oregon.

Current Unit Boundaries: (See BLM Unit Character Map): No boundary roads were driven as they are high-standard, paved routes.

N. boundary: Private and State lands

No Photos

E. boundary: Juntura Cut-off Road (CNTY 303 Road);

ONDA Photos: None

BLM Photos: None

S. boundary: U. S. Highway 20

ONDA Photos: None

BLM Photos: None

W. boundary: Private land;

ONDA Photos: None

BLM Photos: None

Interior Boundary Roads: Two interior routes, one accessing two reservoirs in the western portion of the unit and another to a well and large bottomless tank were

identified as interior boundary roads. The reservoirs road was bladed in 2007 and the well/tank road was constructed and is maintained to allow trucking of water for livestock to pastures which have no water sources. Other interior routes are unmaintained routes which BLM does not intend to maintain in the future.

(2) Is the unit in a natural condition?

Yes No N/A

1979 Unit Description: The unit is located two miles east of the small rural community of Drewsey. The 1979 inventory report noted the unit, which was not intensively inventoried, was an area of rolling hills and some plateaus with sagebrush and juniper vegetation. Developments were fences and stock water reservoirs. A mining claim for diatomaceous earth is located in the south central area of the unit. The works of man were substantially unnoticeable because of the location of these developments. The unit was found to have naturalness.

Current Condition Description: The central portion of the unit is a small, high, plateau which drops off sharply on the east to the paved County Road 303, on the south to U. S. Highway 20 in Kingsbury Gulch and on the west to private lands in Drewsey Valley. A small parcel of land in the unit's southeast corner is within the BLM Vale District. It is located in Kingsbury Gulch where the Juntura Cutoff Road meets U. S. Highway 20.

The current Drinkwater Unit contains less area than the original. A well and stock water trough with access road is now located in the east-central section of the unit. There are three small reservoirs with three fenced pastures of the River Allotment and small portions of two other pastures within this unit. The primary use is livestock grazing. The unit currently has the following developments (**See Unit Character Map**):

Fences: 20.4 miles
Reservoirs: 3
Wells: 1
Trough: 1
Cattleguards: 1
Boundary roads: 14.1 miles
Non-boundary roads: 3.3 miles
Mineral material sites: 12.6 acres

(3) Does the unit have outstanding opportunities for solitude?

Yes No N/A

1979 Unit Description: It is clear that the unit does not possess wilderness characteristics. The rolling sagebrush and scattered juniper covered hills in this area gently slope to a flat top plateau in the center of the unit. Views from most points within the unit are unrestricted. Therefore, due to the general lack of topographic or vegetative

screening, this area does not possess an outstanding opportunity for solitude or a primitive and unconfined type of recreation and should not be intensively inventoried.

Current Condition Description: The ID-team was in agreement with the original unit findings. Since it is such a small area and directly affected by sights and sounds of vehicle use on boundary roads, the unit does not have outstanding opportunities for solitude.

(4) Does the unit have outstanding opportunities for primitive and unconfined recreation?

Yes _____ No X N/A _____

1979 Unit Description: Some opportunities for deer and antelope hunting and trapping were present but were not outstanding.

Current Condition Description: The ID-team found that the recreation opportunities identified above are likely still present. Their diversity and quality are not unlike that which can be found on public lands in the much of eastern Oregon in the Northern Great Basin region. They are not unique and do not present characteristics either individually or collectively that would result in these recreation activities being outstanding within the unit.

(5) Does the unit have supplemental values?

Yes _____ No X N/A _____

1979 Unit Description: None identified.

Current Condition Description: None identified.

Summary of Findings and Conclusion

Unit Name and Number: Drinkwater, 2-20

Summary Results of Analysis:

1. Does the area meet any of the size requirements? X Yes ___ No
2. Does the area appear to be natural? X Yes ___ No
3. Does the area offer outstanding opportunities for solitude or a primitive and unconfined type of recreation? ___ Yes X No ___ NA
4. Does the area have supplemental values? ___ Yes X No ___ NA

Conclusion (Check One):

The area-or a portion of the area-has wilderness character.

The area does not have wilderness character.
