

One of a Kind

The Dwarf Woolly Meadowfoam grows nowhere else in the world except on top of Upper and Lower Table Rocks!

Dwarf Woolly Meadowfoam

It's an ordinary looking flower, but did you know that it has something in common with a sperm whale?

The Oil!

Scientists have discovered that the seeds of the meadowfoam contain a very high quality oil that is similar to sperm whale oil. We use this type of oil on spaceships, airplanes, and in cosmetics.

Please admire with care.
They are Very Rare!

What does it look like?

This plant grows in the wet areas on top of both Table Rocks. It grows low to the ground and has small leaves. The flower is small and white with five petals. It usually blooms sometime in April.

Remember! Spare a flower, share a flower!
If you pick a flower, no one else can enjoy its beauty.
