

**Response to DHSS Comments on the
Draft Non-time Critical Action Memo, Red Devil Mine**

Comment 1: Page 1. Lines 10-11. We may consider deleting “tailings that contain” and “in concentrations”. They seem to be redundant.

Response 1: the sentence will be rewritten as follows, “associated with tailings that contain mercury and arsenic concentrations above risk-based levels.

Comment 2: Page 6 under “Other Actions”, “Ak” should be “AK”.

Response 2: Agreed. The change will be made.

Comment 3: Page 9. There are three bullets in that page. The second appears indented farther than the other two.

Response 3: After reviewing the pagination of the document, the bullets are indented the same. No change is proposed.

Comment 4: Page 10. Last line. “...transport to the temporary.” Appears to be missing a word, as if it was truncated.

Response 4: Correct. The word stockpile has been added to the end of the sentence.

Comment 5: Page 11. Paragraph 2. “...flow through the current channel between down-stream of the...”. It is not clear what two entities “between” refers to.

Response 5: The word “between” will be removed.
