

BLM – IDAHO SPECIAL STATUS ANIMAL SPECIES: October 2015

Type 1 – Includes species listed under the Endangered Species Act (ESA) as Endangered (E) or Threatened (T), Experimental Essential (XE) populations, and designated Critical Habitat (CH).

Note: Periodically confirm E, T, XE and CH status on the U.S. Fish and Wildlife Service (FWS) and NOAA Fisheries websites below. Critical Habitat (CH) is noted in this table as a reminder for consideration during planning and implementation efforts.

FWS Idaho Fish and Wildlife Office: <http://www.fws.gov/idaho/agencies.htm>

References and Information Sources:

6840 – U.S. BLM Special Status Species Management Manual (12/12/2008)

.2 Administration of Bureau Sensitive Species. This section establishes procedures for the management of species designated as BLM sensitive, and their habitat. It is in the interest of the BLM to undertake conservation actions for such species before listing is warranted. It is also in the interest of the public for the BLM to undertake conservation actions that improve the status of such species so that their Bureau sensitive recognition is no longer warranted. By doing so, the BLM will have greater flexibility in managing the public lands to accomplish native species conservation objectives and other legal mandates. When administering the Bureau sensitive species program, all information shall conform to the standards and guidelines established under the Information Quality Act.

In compliance with existing laws, including the BLM multiple use mission as specified in the FLPMA, the BLM shall designate Bureau sensitive species and implement measures to conserve these species and their habitats, including ESA proposed critical habitat, to promote their conservation and reduce the likelihood and need for such species to be listed pursuant to the ESA. Any obligation to conserve proposed critical habitat under this section is terminated at the time the proposal becomes final or the habitat is no longer proposed for listing. All federally designated candidate species, proposed species, and delisted species in the 5 years following their delisting shall be conserved as Bureau sensitive species.

- A. Designation of Bureau Sensitive Species. State Directors shall designate species within their respective States as Bureau sensitive by using the following criteria. For species inhabiting multiple States, State Directors shall coordinate with one another in the designation of Bureau sensitive species so that species status is consistent across the species' range on BLM-administered lands, where appropriate. Species designated as Bureau sensitive must be native species

found on BLM-administered lands for which the BLM has the capability to significantly affect the conservation status of the species through management, and either:

1. There is information that a species has recently undergone, is undergoing, or is predicted to undergo a downward trend such that the viability of the species or a distinct population segment of the species is at risk across all or a significant portion of the species range, or
2. The species depends on ecological refugia or specialized or unique habitats on BLM-administered lands, and there is evidence that such areas are threatened with alteration such that the continued viability of the species in that area would be at risk.
